

Backend Coding Test

PDF RAG Pipeline

Time Limit	60 minutes
Tech Stack	Python, FastAPI, Pydantic

Task

Build an API that allows users to upload PDF documents and then search through them using natural language queries.

A sample PDF document is provided for testing your implementation.

Requirements

- An endpoint to upload and process PDF files
- An endpoint to query the uploaded content semantically
- Use FastAPI with Pydantic models
- The solution should work locally

Submission

- GitHub repository
- README with setup instructions

Good luck!
